

NIDEK FOCUSES ON EYECARE 3000

Nidek's advanced diagnostic technology comes into sharp focus at Glasgow's Eyecare 3000.

The high resolution spectral domain Nidek RS-3000 OCT, now proven in practice, brings superb quality imaging. Compact, easy to use, with auto-focusing, it allows ancillary staff to undertake scans as part of the pre-screening process.

With six retinal layers viewed simultaneously, the software analysis includes macular thickness map, RNFL thickness and optic nerve screening.

Nidek fundus cameras, combined tonometer and pachymeters, autorefractors and keratometers will also be available to trial.
